The Science of Higher Yields

Farming Smarter

Report # : 159545
Report Date: 2023-12-15
Received: 2023-09-19
Completed: 2023-09-21
Test Package: SF15

Project:
Grower: Farming Smarter
Farm:
Field: NASA Outside West
H₂O Mgmt: Irrigated

Notes:

Down to Earth Labs Ltd. Laboratory Fertilizer Guidelines are determined by subtracting the sum of the test results from the crop requirements as determined by Alberta Agriculture. Subtract nitrogen credits for legume crops from the guidelines if applicable. Estimated nitrogen release from organic matter is not considered in these guidelines. Subtract out estimated remaining fertilizer in soil depths not tested through the root zone. Starter fertilizers may be needed in the seed bed to assist seed development. Consult your Agronomist or Crop Advisor for a comprehensive analysis of your soil results for determining fertilizer applications. Lime Requirements are based on a tillage depth of 6" and are estimated based on lime with an ag index of 75. Adjust lime amount according to farming practices. ECEC = Estimated Cation Exchange Capacity, Total %BS = Estimated Total % Base Saturation, SAT% = Saturation % BDL = Below Detection Limit These results are not an endorsement of sampling methods.
