To be added (lbs/ac)	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0

Parts of the field may be Copper deficient.

Parts of the field may be Copper deficient.

Comments:

Element uses nutrient extraction and analytical methods specifically developed for western Canadian soils.

The modified Kelowna extractant used to analyze key nutrients in this Farm Soil Analysis report is the standard method used in soil fertility research in western Canada. It is used in developing crop response curves to fertilizer in the prairies. The Element "RECOMMENDATIONS FOR BALANCED CROP NUTRITION" are based on those research data. Element recommendations are accurate but should not replace responsible judgement.
